Sean Sekora

My passion is turning AI from an individual productivity boost into an org-wide engineering force multiplier

Greater Pittsburgh Region

Summary

My passion is turning AI from an individual productivity boost into an org-wide engineering force multiplier.

I've spent 24 years building software, nearly a decade of that at Smartsheet where I was consistently selected to contribute to the highest-stakes technical initiatives: cloud migrations, monolith decomposition, platform architecture, and most recently, the company's agentic AI strategy alongside principal engineers and the VP of Engineering.

That AI work is where everything clicked for me. I helped evaluate and drive adoption of tools like Claude Code and Windsurf, built MCP integrations connecting AI to real engineering systems (GitLab, Jira, Datadog, PagerDuty, Confluence), and supported adoption across the org through hands-on mentorship rather than mandates. I saw firsthand what happens when you move from ad-hoc AI experimentation to shared workflows, feedback loops, and patterns that make every engineer more effective.

Now I'm focused on this full-time. I'm building LocalWhisper.ai using Claude Code as a force multiplier across the entire SDLC, and I'm looking for a role where I can help an engineering organization build a company-wide AI development ecosystem that empowers teams to ship higher quality software, faster and more securely.

My background is a combination you don't often see together: deep platform engineering experience (AWS migrations, microservices, orchestration frameworks) plus hands-on AI acceleration work (MCP integrations, agentic workflows, adoption strategy). I also have an entrepreneurial streak, having co-founded two startups through AlphaLab in Pittsburgh.

I'm most energized when I'm figuring out how agentic AI tools and practices can elevate engineering teams, and getting engineers genuinely excited about integrating them into their day-to-day work.

Experience

Smartsheet

Senior Software Development Engineer II Smartsheet

July 2016 - Present (9 years 10 months)

Bellevue, WA

Selected time and again for foundational engineering initiatives over nearly a decade at Smartsheet, spanning monolith decomposition, cloud migration, platform framework design, and enterprise AI strategy. Partnered with principal engineers, staff-level peers, and VP-level leadership to shape technical direction and drive cross-team execution.

- Co-designed the Solution Orchestrations Service for workspace and project provisioning alongside a cross-functional team of senior and principal engineers, and currently leading cross-team onboarding of service providers into the framework.
- Selected as part of a senior technical leadership group alongside principal engineers and the VP of Engineering to define Smartsheet's agentic AI strategy; led evaluation of Claude Code and Windsurf and established workflow standards that reduced the "cold start tax" for codebase onboarding.
- Built Smartsheet's Model Context Protocol (MCP) integration from the ground up, shipping connectors to the Roo Code Marketplace and Claude and positioning Smartsheet as one of the early enterprise platforms to enable AI-native workflows through MCP.
- Led the first service migration from datacenter to AWS as part of Project Nimbus, coordinating a cross-functional team spanning database, infrastructure, and service engineering.
- Directed the migration of Smartsheet's Notification Center from a legacy service to a new REST-based architecture, leading a squad of four engineers through planning and delivery.

Qlinary Inc.

Senior Software Engineer

April 2014 - July 2016 (2 years 4 months)

Los Angeles, CA

Led the architecture, development, and engineering initiatives for a company dedicated to intuitive kitchen management software solutions. Entrusted to

identify issues with the existing underperforming product design and created effective corrective action plans. Architected a new solution for restaurants to efficiently manage operations, products, vendors, recipes, and inventory. Environment: Java Play Framework, Ruby on Rails, PostgreSQL, AngularJS, Kendo UI, Heroku, Amazon Web Services, and Chef

- * Successfully determined best possible solutions by analyzing and comparing various Java frameworks and cloud hosting environments.
- * Proposed/secured executive buy-in for Play framework and Amazon Web Services based on business requirements and future scaling.
- * Designed a complex Service Oriented Architecture (SOA) for the application.
- * Directed and led a complete and successful redesign of a large-scale restaurant management system.
- * Met all business requirements by researching, designing, and developing a custom multi-application security layer.
- * Effectively improved application performance, reliability, and scalability by leading the design, setup, and administration of an AWS OpsWorks based environment comprised of load balancers, application servers, Apache Solr servers, and Postgres servers.

Philips

Senior Software Engineer

January 2014 - April 2014 (4 months)

Greater Pittsburgh Area

Serve as a senior software for a company focused on transforming the delivery of healthcare solutions.

Environment: Ruby on Rails 3 and 4, MySQL, TDD using RSpec, BDD using Cucumber and Agile with Scrum.

- * Significantly improved code quality and overall performance of their flagship medSage product by resolving long-standing bugs.
- * Streamlined the follow-up status processes for patients and customers through the successful development and implementation of an internal call center phone survey application.

Modotech

Programmer | Analyst

October 2008 - January 2014 (5 years 4 months)

PA

Contributed to the software development initiatives and served as a pivotal technical resource in the development of enterprise software applications for property/casualty insurance clientele, from needs assessments through testing and implementation.

Environment: Adobe, ColdFusion, Microsoft SQL, Visual C++

- * Led the architecture and development of a complex insurance verification system for Nevada's Department of Motor Vehicles.
- * Expedited the contract/application processes by implementing e-Signature/DocuSign capabilities. Effectively eliminated paperwork and reduced turnaround time. Launched a document management system to generate customized claim letters/forms in PDF format.
- * Streamlined processes, for end-users, through the design and development of a guided application/endorsement user interface.
- * Increased throughput of claim inspections and reporting protocols by driving the implementation of an Audatex integrated solution.

Citynet

Team Lead & Senior Software Developer

September 2005 - October 2008 (3 years 2 months)

WV

Quickly earned two promotions, due to outstanding work performance, and entrusted to lead and manage seven developers. Managed internal enterprise applications through the SDLC including purchase ordering, resource provisioning, content management, and digital phone administration. Led team to develop internal customer facing business applications. Environment: ColdFusion, Microsoft SQL

- * Consistently exceeded expectations and earned 'Employee of the Year' honors.
- * Directed and led the architecture, development, and training of an internal purchase order system.
- * Trained and mentored development team in object oriented analysis and design (OOAD).
- * Developed and implemented high-level coding standards and comprehensive peer-based code reviews.

Literati

Web Developer

April 2004 - September 2005 (1 year 6 months)

WV

National Alternative Fuels Training Consortium

Assistant IT Specialist

January 2001 - October 2003 (2 years 10 months)

WV

Education

West Virginia University

Bachelors Of Science, Computer Engineering · (1997 - 2002)
